

GDP of European Union regions in 2003

GDP per inhabitant (PPP*)
EU25 = 100

0 500 km
Source : Eurostat 2006
© IAURIF / DEFL

*Purchasing power parity (PPP) is an exchange rate that makes it possible to compare the real volume of goods and services produced in different countries, by eliminating differences in price levels. The index of the volume of GDP per inhabitant, calculated on the basis of PPP figures, is expressed by comparison with the average for the European Union (EU of 25 Member States), which is set at 100.

The map shows data for EU Member States in 2003 and countries that joined the Union on 1 May 2004. Data for Romania and Bulgaria, which joined the EU on 1 January 2007, are not yet available.

GDP

Gross Domestic Product

	Paris Île-de-France			Metropolitan France
	2003	2004	2005	2005
GDP in value terms ⁽¹⁾	455,789	469,046	480,870	1 681,727
GDP per job ⁽²⁾	84,935	87,804	89,989	68,963
GDP per inhabitant ⁽²⁾	40,484	41,662	42,712	27,957
GDP in volume terms ⁽³⁾	429,671	434,650	439,239	1,526,529

(1) In millions of euros at the current exchange rate

(2) In euros at the current rate

(3) In millions of euros at a constant exchange rate

Note : As regional population figures for 2004 and 2005 were not available when the regional accounts were distributed, GDP per inhabitant for both these years has been estimated by comparing GDP to the population in 2003

21	Toronto	64.5
24	Paris	59.6
27	Barcelona	50.0
28	Milan	48.7
32	Seoul	38.5
35	Johannesburg	31.7
38	Singapore	28.1
40	Hong-Kong	23.8
43	São Paulo	21.5
48	Moscow	17.3
49	Warsaw	16.8

Base 100 : Zurich

These calculations are based on the following data: salaries, social contributions and working hours of 13 worldwide professions.

For each profession, a number of criteria were used relating to people's experience, age, marital status, etc.

All these data were brought together in an index weighted to be representative of the jobs, income levels and genders specific to each profession.
